

NovoComplete Starting page

Considerations to the use of novoComplete: When the Trial Stop Date has been announced, it is **mandatory** to enter the scheduled /planned End of treatment (EOT) and Follow-up (FU) visit dates in novoComplete. The tool can be used to keep track of the EOT and FU visits and to get guidance on the correct timing of these visits.

- LINK to how to use novoComplete

Completion package documents can be found in CONNECT -> Trial Space -> Tools and resources.

Following should be considered when planning EOT and FU visit:

For all patients at your site, the End of Treatment/Follow-up visits must be performed after Trial Stop Date, and within 12 weeks after Trial Stop Date.

- EOT visits must not be later than 6 weeks after Trial Stop Date.
- No FU visits must be earlier than 5 weeks after EOT visit
- No FU visits before EOT visits

Clarification on warnings:

- Whenever a warning is appearing beneath the patient ID, you can get more information by clicking on the icon. Please take action on all warnings

Specifications you need to know:

- Patients who are registered in EDC as withdrawn, passed away or lost to follow-up are redacted from the list.
- Always click submit = save when you have completed your entries in the tool.
- You can download a copy of your entries by clicking on "download CSV"

At all times, if N/A is used for End of treatment (EOT) visit dates, you should provide a rationale to your Novo Nordisk contact for not conducting the visit for example:

- The patient has agreed to only one last contact at the end of trial. The date of the contact should be entered in the Follow-up (FU) visit field.
- Site was unsuccessful in contacting patients within the first 6 weeks after trial stop date.
